

**Customer:** Antares Management Solutions

**Location:** Toledo, Ohio

**About the Customer:** Antares Management Solutions provides best-in-class business processing and application hosting services for the life, health and accident insurance industries, and information technology services for small- to mid-sized organizations throughout North America.

**The Application:**

Their console was from 1986 and it was time to replace it. Their data center was downsized in the mid 90s, they did not need one as big as what they had.

**Reason for Selecting Mainline and the proposed solution:**

*"I chose Mainline because of the genuine interest and involvement that they exhibited when we were going through the selection process. NOC Vision was the best looking selection that I found for the cost. Post-installation support has been excellent also."*

Jim Borsos~  
Data Center Manager
