

Case Studies

Industry: Hospital

Application: LAN Work Station

Customer: Grady Hospital

Location: Delaware, Ohio

Customer Profile: Grady Memorial Hospital has been a part of the Delaware community since 1904, when penicillin and lasers were distant dreams. During the intervening century, modern medicine has seen amazing changes—and so has Grady. More than 200 physicians practice in 26 specialty areas, from allergy to urology. Outpatient visits, laboratory testing, home health care, and occupational health services complement a wide variety of traditional healthcare services including maternity, emergency medicine, and surgery.

The Need: The hospital growth had caused a significant need for a new larger data center, which the hospital designed and built. That new data center required additional workstations for its daily operations and monitoring of mission critical applications. As part of that project Mainline provided a LAN Work Station to accommodate their file servers, monitors, keyboards and other networking equipment.

The Product Used: As part of that project we provided a *DuraMax LAN Work Station* to accommodate their file servers, monitors, keyboards and other networking equipment.

Why Mainline: Grady's IT Management required a vendor who could be a single resource for its Workstation, Training Room, Computer Room Security and Audio-Visual Needs.
